

AccessEd & Commonwealth
Scholars Training

Preparing for social impact: strategy planning

Ashley Hodges
Chief Executive, AccessEd

@_AccessEd
#AccessEdTraining

Welcome to today's workshop

Zoom Housekeeping:

- Please ensure you are **muted** if you are not speaking to the group
- We appreciate if you can keep your camera on for an interactive workshop, but especially for the breakout groups!
- However, if you are having connectivity issues, please try turning off your camera until breakout rooms
- Please use the chat box if you have any questions or require any help as we go.

AccessEd: Who are we?

- AccessEd is a non-profit organisation committed to supporting postgraduate researchers in their professional development and university access programmes to increase social impact globally.
- AccessEd has expertise working with international students and social enterprises, as well as delivering courses in transferable skills for the 21st century. AccessEd bridges the gap from education to the professional and public sectors.

Introduction to your trainer

Ashley Hodges

Chief Executive, AccessEd

Has designed, launched and led social impact organisations, such as charity Speakers for Schools and worked for Obama for America

Expertise in social enterprise projects, community investment programmes and working cross-sector with world-leading corporations and institutions

Why impact strategy planning training?

This training is good for researchers who:

Want to understand how they can think about having future impact even if still formulating their research

Understand how research can lead to having social impact

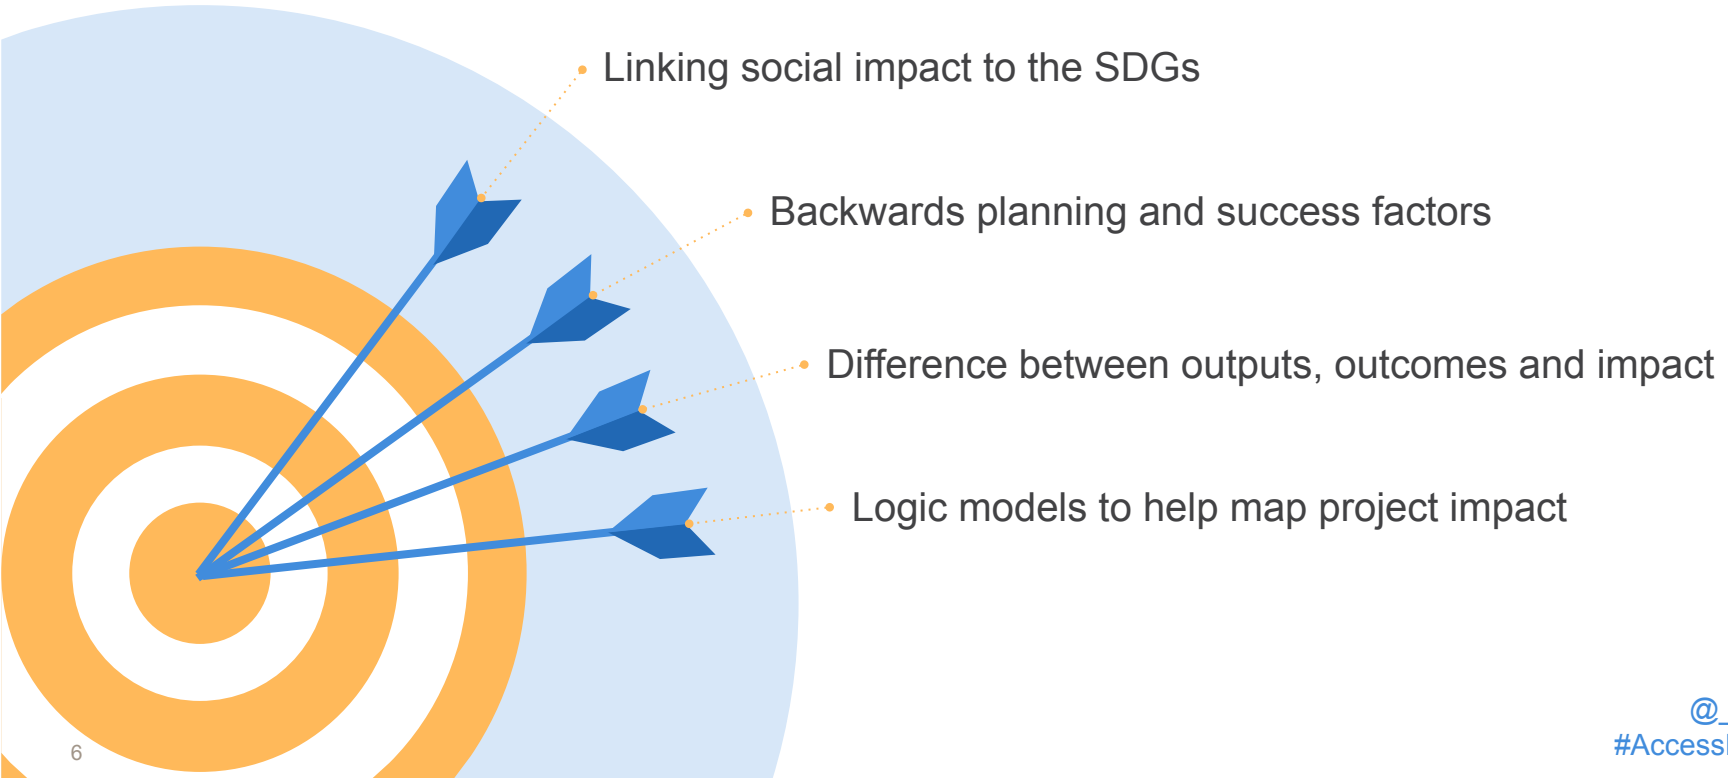

Intend to enter fields related to social, economic and political impact that can improve the lives of others

Want to discuss their plans and test ideas with peers in this group

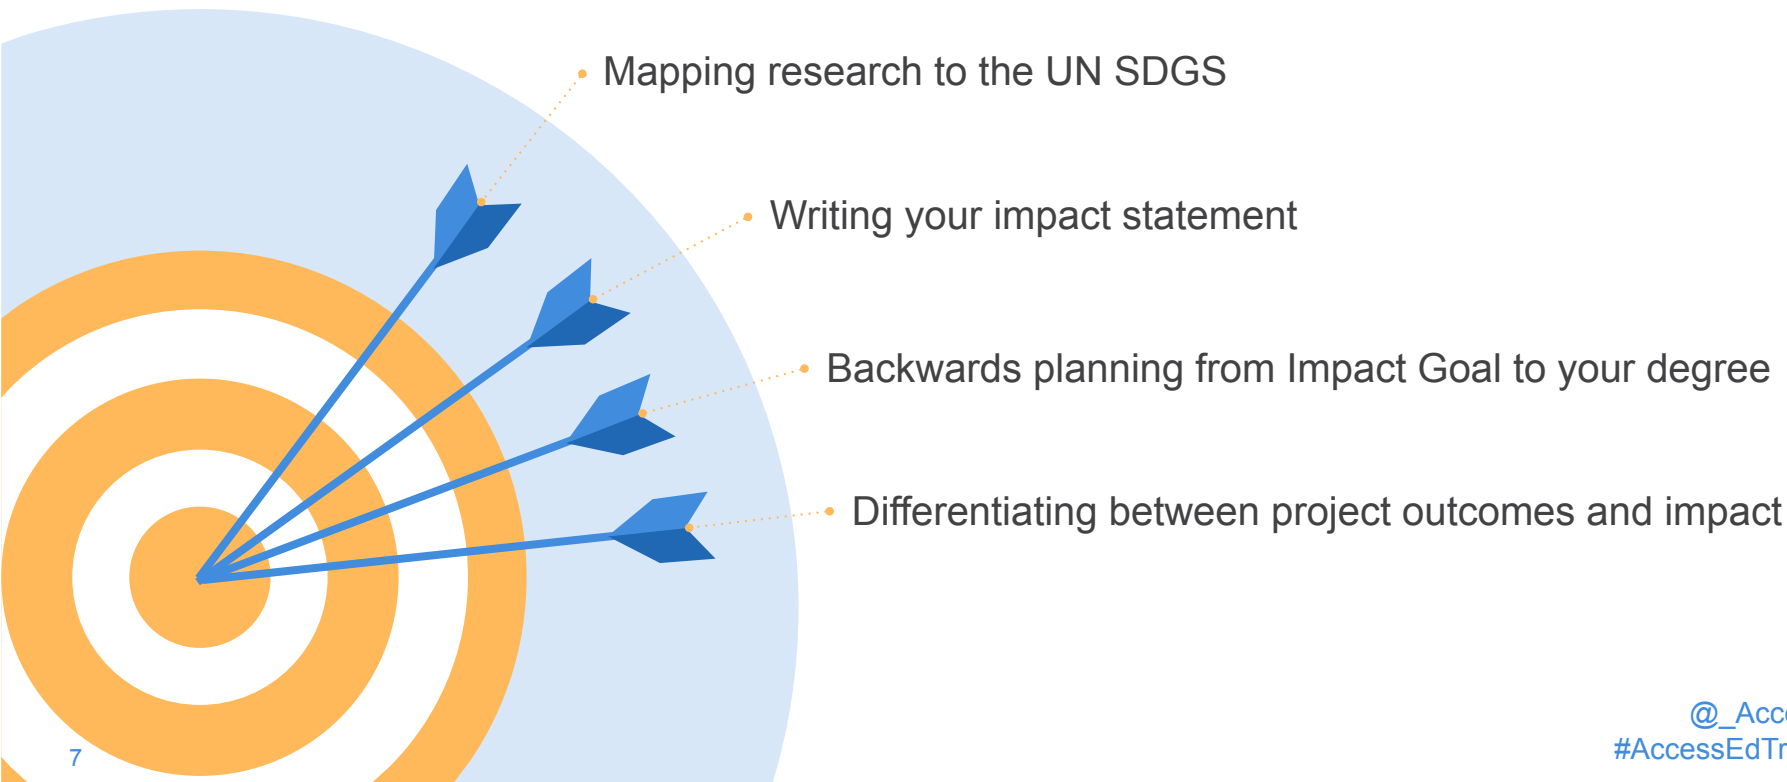

Session learning outcomes

Understanding of:

Session learning outcomes

Practical experience in:

Ice breaker

Impact

Definitions and impact
in your research

What is research impact?

Definition:

Research impact is broadly defined by Research Councils UK (RCUK) as the demonstrable contribution that excellent research makes to society and the economy”.

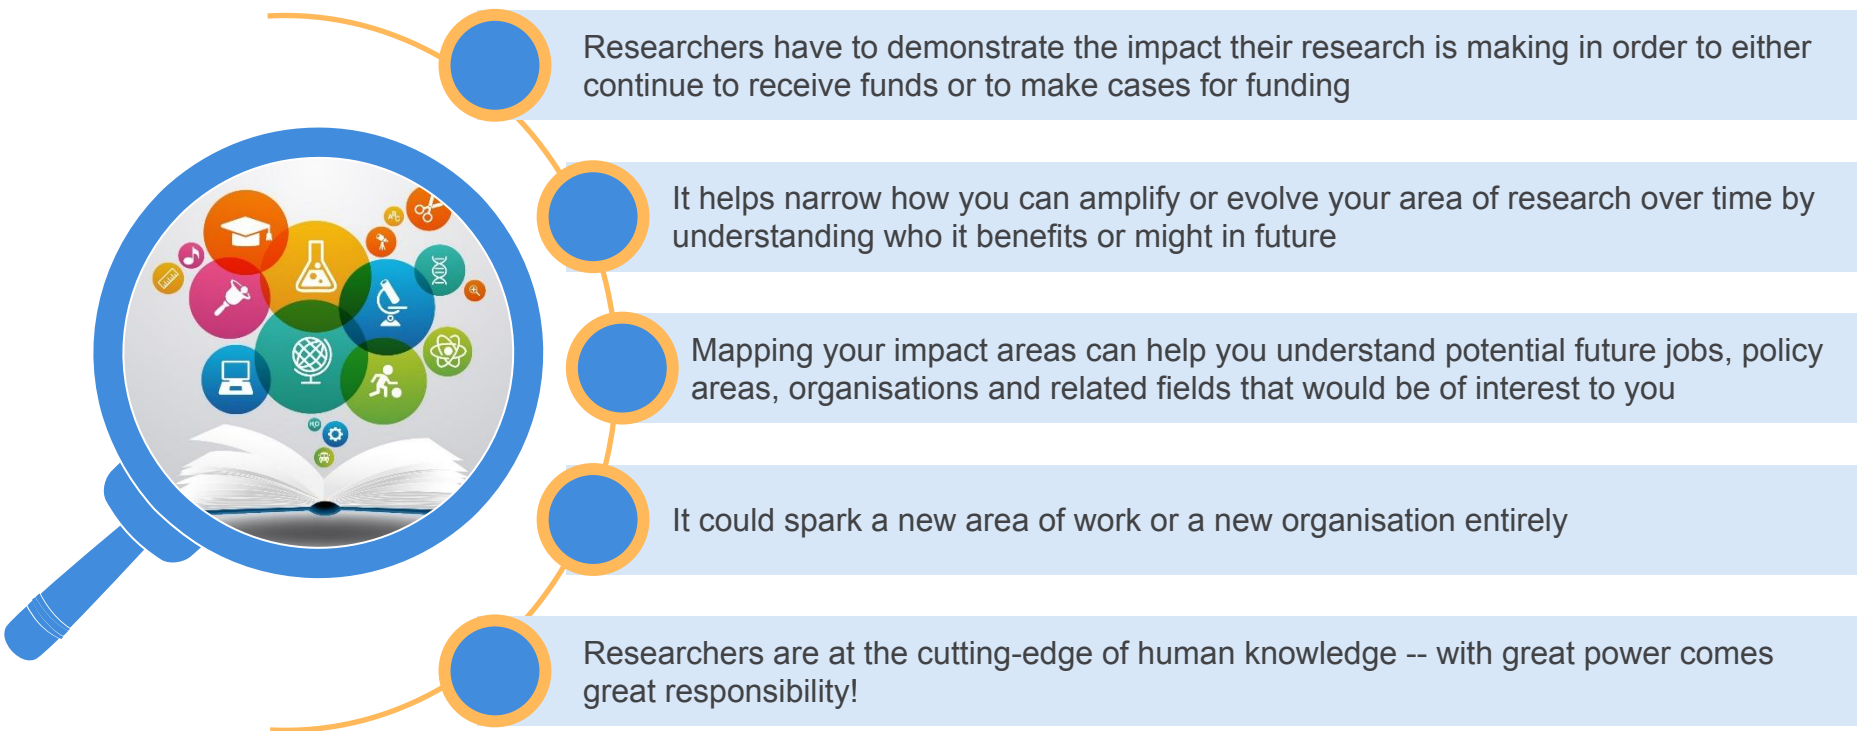

For RCUK, impact from research has two main strands, ‘academic impact’ (or scholarship that influences the academy) and ‘economic and societal impact’

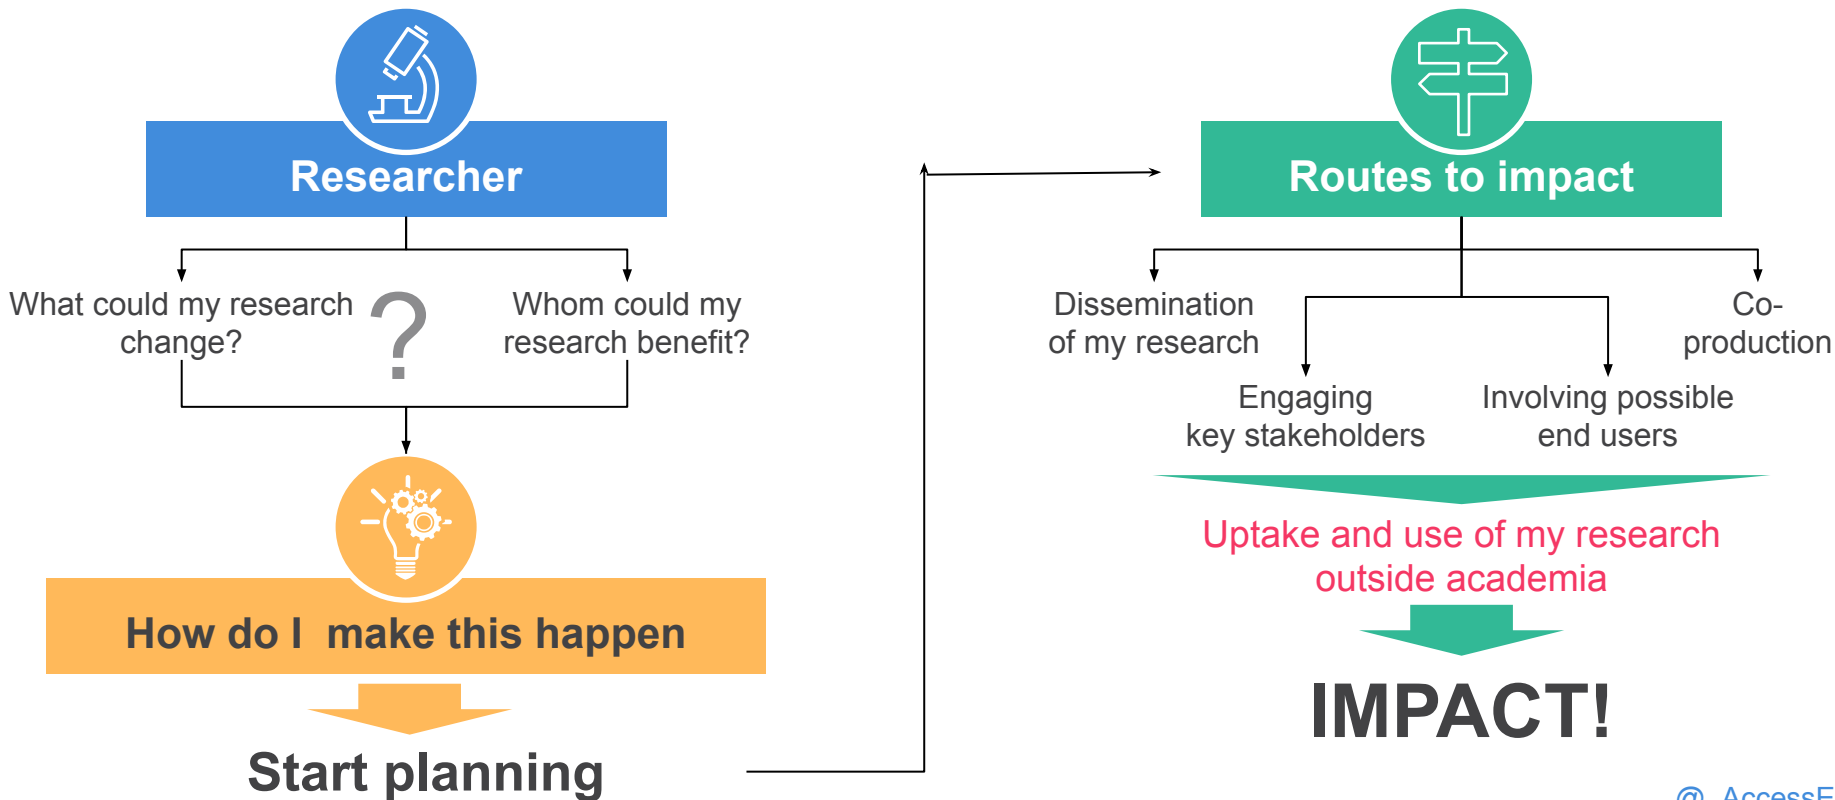

'It is not enough just to focus on activities and outputs that promote research impact, such as staging a conference or publishing a report. You must be able to provide evidence of research impact, for example, that it has been taken up and used by policy makers, and practitioners, has led to improvements in services or business.' - RCUK

- **Emphasis on ensuring that impact is made beyond the walls of the university**, beyond contributions to knowledge within academia so that research has some form of effect on, or benefit to the economy, policy, services or quality of life.

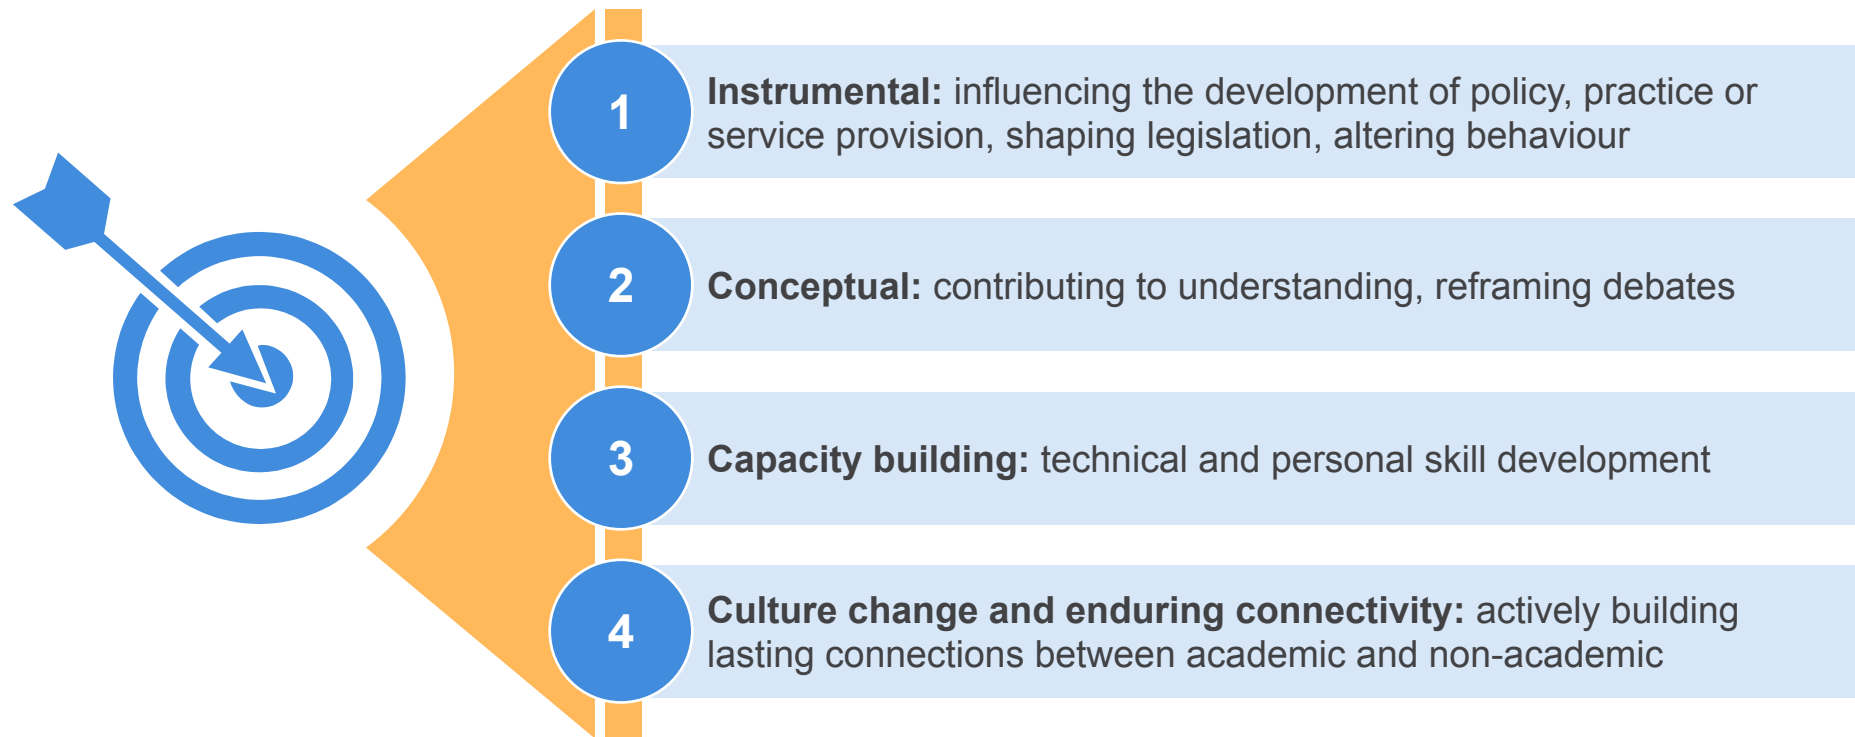

Why does your impact matter?

What does impact look like in the context of research?

Different types of impact

Where does impact research creation come from?

1. Responsive impacts

impacts that arise from research conducted in response to an already identified unmet need/problem, e.g. a call for further evidence from a governing body to revise policy.

4. Passive impacts

impacts that arise serendipitously from research. There is no active engagement with stakeholders and the researcher has very limited or occasionally no knowledge of where, and by whom, their research is being used and the nature of the resulting impact.

2. Proactively nurtured impacts

impacts that arise from research that identifies the unmet need/problem. In these instances, stakeholders must be made aware and convinced of the relevance and potential to translate to a benefit of the findings.

3. Reputational impacts

impacts that arise where a member of research staff is approached by stakeholder based on their clear track record for impact in a similar field, i.e. the stakeholders seek out the researchers and commission the work.

Sustainable Development Goals & Millennium Development Goals

<https://www.un.org/sustainabledevelopment/sustainable-development-goals/>

SDGs and researcher impact – what role do you play?

Researcher education has major role to play in the achievement of SDGs

- SDGs have become an important framework and inspiration for policy development.
- Investment in research is necessary for the achievement of all the SDGs – e.g. to develop new technologies, inform better policies or to promote societal debates - key to advancing and completing the goals by 2030.
- Great researchers have skills necessary to achieve SDGs such as dealing with ethical dilemmas, assessing potential and risk of new technologies, etc
- It also encourages contributions via cross-disciplinary knowledge!

Activity: how does your research affect SDGs?

Group discussion:

- Which SDG does your research address or fit with?
- What is the impact it would have on the SDG?

Planning for impact

Tool 1 - Backwards planning for impact in your field

Planning for Your Impact

“

In planning for battle, I have always found that plans are useless, but planning is indispensable

Dwight D. Eisenhower

”

Planning for Your Impact

- 1 Outline your wider impact goal:** what's the purpose of your research; who does it help? What problem does it solve?
- 2 Identify success factors:** These make up your building blocks for your activities
- 3 Set long term goals:** These are the broader activities to work towards could see your research make impact
- 4 Set short term goals:** These are the building blocks to your long-term goals
- 5 Create an action plan for your degree:** Set the activities and timelines of what you want to achieve for your short-term goals

Step 1 – What's your impact goal?

Now that you have thought about your link to the SDGs, take a moment to articulate impact you hope to have in your field:

What problem are you solving?

'Fewer maternal deaths through improved nutritional information by uncovering (insert your research goal)...'

'Change economists awareness of new market models that encourage micro-financing by capturing (insert your research goal)... '

To create an alternative to silicon in electronics by (insert your research goal)... '

Your impact statement

Write an impact statement based on your process

I want to (**impact goal**) by (**research impact**) and (**success factor**). To do this, I will need to (**long-term activity**) through/after (**short term activity**.)

Example:

- I want to (*reduce miscarriages in rural areas*) by (*creating improved insights as to the role of minerals and vitamins*) and (*ensuring it is disseminated widely to mothers who are over 12 weeks' pregnant*).
- To do this, I will need to (*have an established profile with health NGOs/be in a delivery role at a health organisation ...*) through/after (*funding my additional zinc study/building links with the most international health organisations.*)

Step 2 – What's required for success?

Success indicators are the 'vehicle' that makes your research have impact.

What will make your impact possible? Examples:

Disseminating the findings to the public so they can make better decisions

Support of an institution to change formal requirements or law

A wider change in how others in your field view the issue

Creating a proof-of-concept so that people will back you

These might be too big right now, so don't be afraid to start smaller!

Step 3 - Where do **you** need to be in the long-term?

What will be key or could be key to ensuring you're in a position to influence success of your research?

gained a position at the main organisation that deploys this work

completed a major project that answers a very specific question

developed my profile as a respected academic in this field

have a tested prototype of a product and attract funding/partner

Stage 4 – Where do you need to be short-term?

Example of short-term goals to work towards impact:

Securing a job with a particular role or specific organisation type

Attracting funding for a smaller project that builds your data set

Exceed expectations in publishing your research

Raise your profile through contributing to blogs, events or civil publications

Stage 5 – Identify your activities during your degree

If your goal requires ...	You can....
Working in a specific sector	Find work experience; networking events; speak to alumni
Attracting funding for a project	Attend grant funding workshops; write an impact plan; network; explore who you could partner with to increase interest
Raising the profile of your work	write blogs; ask your university how you can contribute to student papers or media outlets; research your conference circuit
Improving your academic reputation	give yourself more time to publish; understand the role teaching could play;

Tea break

Breakout room activity

Focusing your objectives: Think about one of your short term goals. What activities do you need to be investing time in during your degree to reach these?

Short term Goal	Related Activities	What's my next step?
<i>e.g. Attract funding from a specific area</i>	<i>e.g. Publishing in a new area to show my expertise; attending conferences to meet potential funders; build my profile</i>	<i>e.g. sign up to conferences in sector; investigate new outlets to publish that are of interest to these funders; ask the British Council/UKRC</i>

Impact planning snapshot

Impact	Success indicator	Long Term	Short term	Activity
Improve health equality: Reducing maternal deaths through improved knowledge of zinc	More mother's receiving information to change dietary habits	Be in a role where I can influence public health; Start my own project	Gain experience working with mothers so I understand how research can be used to change outcomes	<ul style="list-style-type: none">– Work experience– Volunteering for projects– Raising my profile to interest potential employers
Improve wealth equality: Increasing smart investment into micro-financing	Seeing a new wave of micro-financing options taken up	Get my economic model in front of micro-finance companies	Fund my research for two more years to build the model that shows non-agricultural options	<ul style="list-style-type: none">– Attend networking events to understand interest– Start to write a business plan– Approach potential partners
Improve sustainability and consumption: Reduce reliance on silicon in mobile phones	Seeing an alternative material being used in place of silicon at market level	Be sponsored by a major lab in pro-typing my new solution	Understanding the engineering process so I can refine my research pitch to influence manufacturers	<ul style="list-style-type: none">– Work Experience with major companies– Partnering on papers– Attend industry conferences

Managing your plan

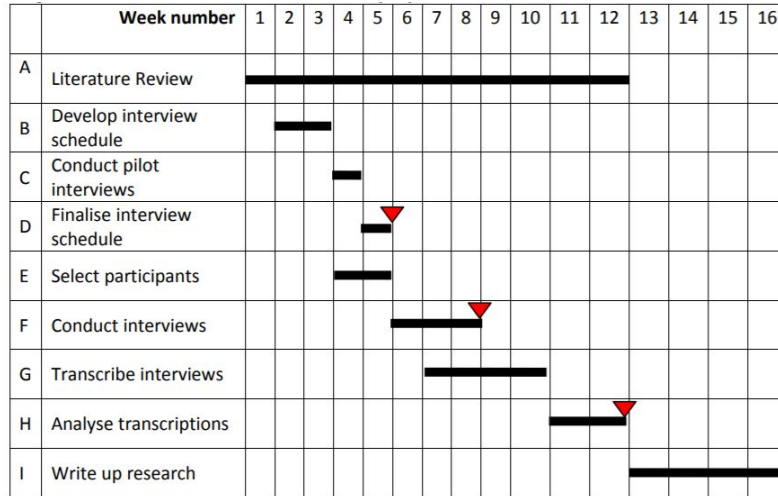

- Talk to others about your workload (supervisor, PGRs)
- Set timings by breaking it down into smaller mini-projects.
- Make deadlines, and make them public
- Try to fit the work that you have to do to a specific timeline
- Allow “slippage” time
- Be as realistic as possible!

→ **Research always take 10% longer than you think it will!**

Managing timelines

Project plan (A) versus simplified task list (B)

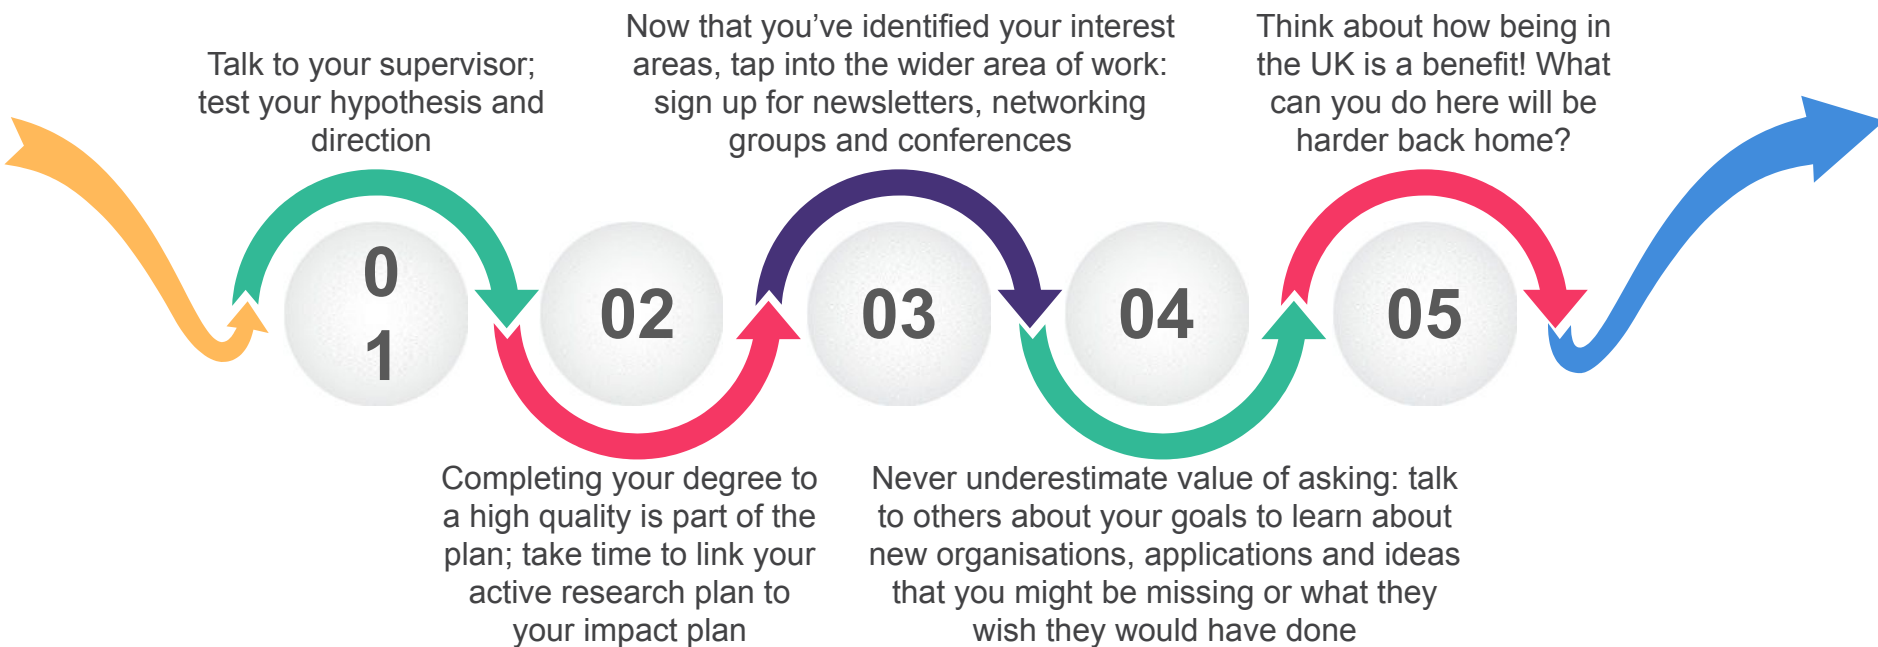

▼ = Milestones

	Task	Earliest start date (week)	Duration (weeks)	Parallel or sequential	Dependent upon
A	Literature Review	1	12	Parallel	-
B	Develop interview schedule	2	2	Sequential	-
C	Conduct pilot interviews	4	1	Sequential	B
D	Finalise interview schedule	5	1	Sequential	C
E	Select participants	1	2	Parallel	-
F	Conduct interviews	6	3	Sequential	D,E
G	Transcribe interviews	7	4	Parallel	F
H	Analyse transcriptions	11	2	Sequential	G
I	Write up research	13	4	Parallel	A,H

What can you do if you get knocked off track?

Planning tips

Remember, your impact planning strategy is iterative. It will change. The process of planning is key in of itself!

Frameworks for impact

Tool 2 – Impact planning for a project

Framework for impact: logic models

Once you are working towards a project that links to your Impact Goal, you'll need to be able to map it out

Logic models:

1

Helpful tool for planning your approach is to use a logic model.

2

Used by many funders, managers and evaluators of complex interventions to help them plan and evaluate their success

3

Enables you to map your project, considering what you are hoping to achieve, and how you plan to achieve this, and to make your assumptions about change explicit

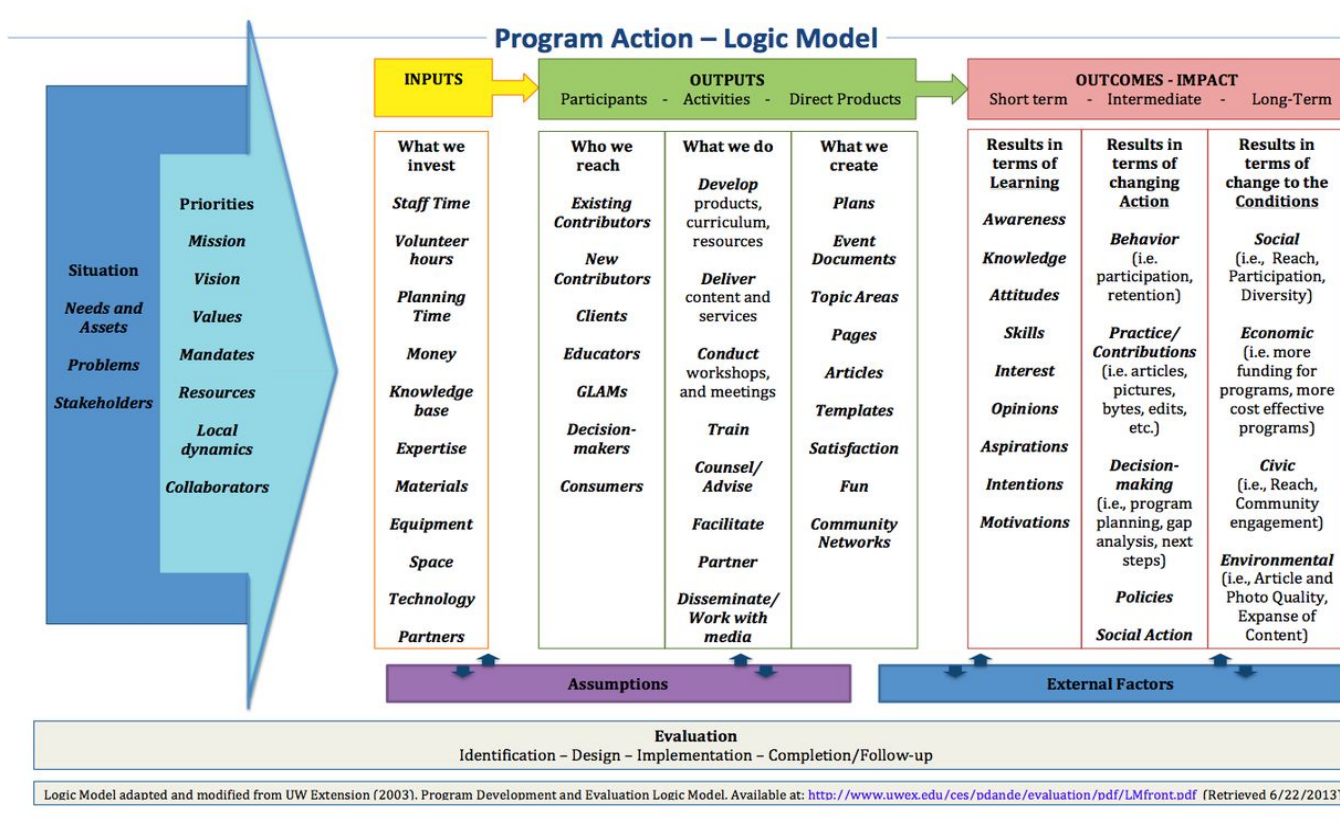

Framework for impact: logic models

Typical logic model will include the following features:

Current situation	A description of the situation you are trying to change
Aims	what you hope to achieve
Inputs	what you will contribute
Activities	what you are going to do to achieve the aims
Outputs	what you create
Outcomes	what happens as a result
Impacts	what is the long term effect, what problem you are solving
Assumptions	that you are making in designing your approach
External factors	that could influence the outcomes of your project

Program Action – Logic Model Road map

Outcomes, outputs and impact of research

Logic models and theory of change focus on Outputs, Outcomes and Impact

Outputs – tangible products (give examples related to research)	Outcomes - results of the activity	Impact
<ul style="list-style-type: none"> – Online resources including websites; tweets; blogs – Events – Exhibition – Publications including leaflets; articles; reports – Partnerships for projects – Training courses – People e.g. numbers and demographics of participants in the activities 	<ul style="list-style-type: none"> – increased understanding of the topic – Skills development – Attitudinal change – Inspiration and creativity – New experiences 	<ul style="list-style-type: none"> – Conceptual – Instrumental – Capacity building

Relationship between the three of these

Framework for impact: logic model activity

Breakout room: Researchers use the logic model thinking to show impact.

Choose a project you are working on or will embark on soon. This could be a research project or a dream project.

Give an example of:

One specific input → output → outcome → impact

Are there any **assumptions or external factors** are you relying on that mean these will produce impact?

Learning Portfolio reflections

Group discussion: what have you learnt in relation to your Learning Portfolio aims?

- How has this session evolved or changed your thinking on aligning your research and impact to the SDGs?
- What is the lasting legacy you want to have as a CSC Scholar in the next 3 years?
