Mastering Networking

@_AccessEd
#AccessEdTraining

Welcome to today's workshop

Zoom Housekeeping:

- Please ensure you are **muted** if you are not speaking to the group
 - We will pause for questions as we go, but do ask as we go along!
 - If you have any technical issues please privately message Sharmin in the chat for her help
 - Feel free to use the chat function for questions, observations
 - For discussions, we encourage use of your camera if possible please!
 - Actively contribute where you can
-

AccessEd: Who are we?

- AccessEd is a non-profit organisation committed to supporting postgraduate researchers in their professional development and university access programmes to increase social impact globally.
- AccessEd has expertise working with international students and social enterprises, as well as delivering courses in transferable skills for the 21st century. AccessEd bridges the gap from education to the professional and public sectors.

Introduction to your facilitator

Katie Booth

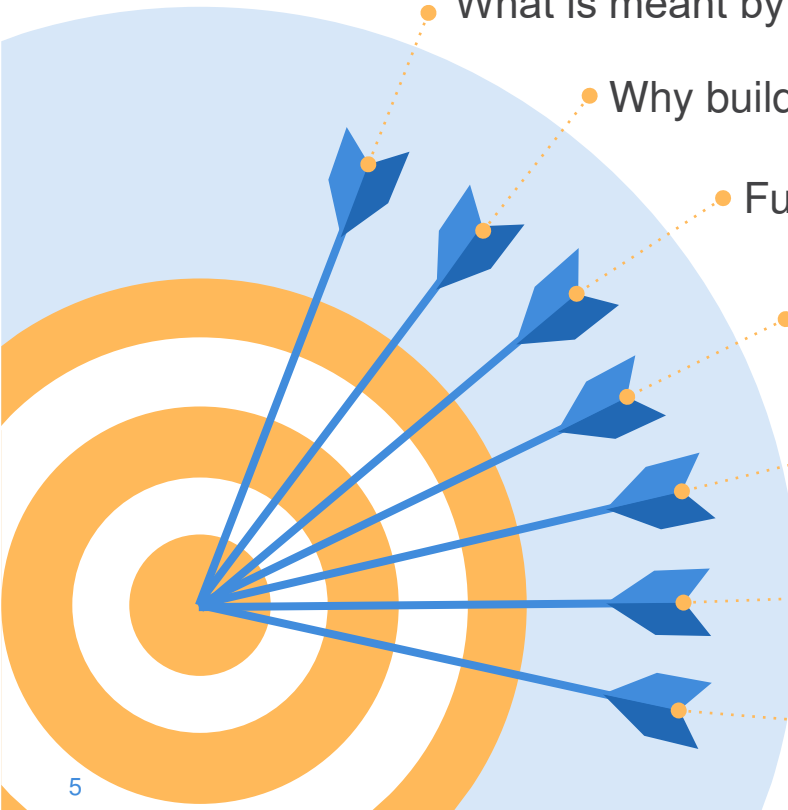

- Managing Director, AccessEd
- Worked at PwC delivering training there
- Worked in the UK and internationally in a variety of organisations and charities, including as Head of Strategy at a large UK education charity

Session learning outcomes

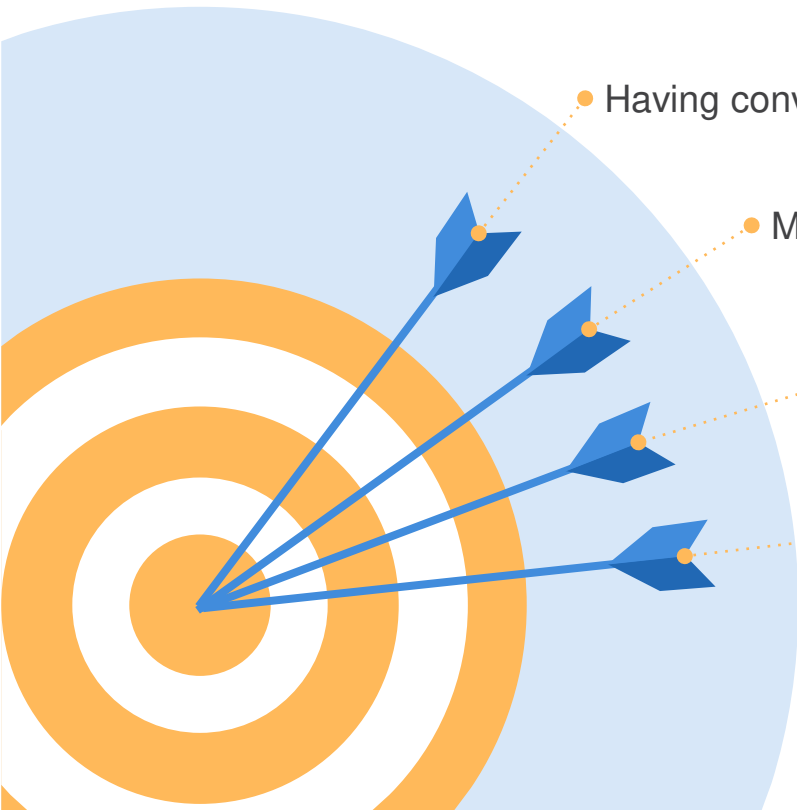

Scholars will leave with an understanding of:

- 
- A graphic of a target with three concentric orange rings and a white center. Eight blue arrows are shown, all originating from the center and pointing towards the outer rings. Each arrow has a small orange dot at its tip, which is connected by a dotted orange line to a corresponding text item in the list to the right.
- What is meant by 'networking'?
 - Why building networks is important
 - Functions within a personal network
 - Basic steps for building a network anywhere
 - Skills of good networkers
 - Where to look to build your professional and personal network
 - How to produce a network map

Session learning outcomes

Scholars will leave having practiced:

- Having conversations to build networks - practicing your skills
- Mapping your own personal network
- Delivering your own research or project 'narrative arc' for communication
- Using storytelling tools for networking and communication

Why Mastering Networking training?

This training is good for researchers who:

would like to understand how networking can be used in a research project and professional (non-academic) setting

want to learn a framework for setting up your own professional network

are interested in building a fundraising network

would like to learn how to map and evaluate their existing networks

want to learn tools to improve their networking skills

What is networking?

“Deliberate action you take to build, reinforce and maintain relationships based on trust with people who can help you or whom you can help to further your respective goals”

Professional network = the group of people you have connected with to advance your career or business.

Ice breaker

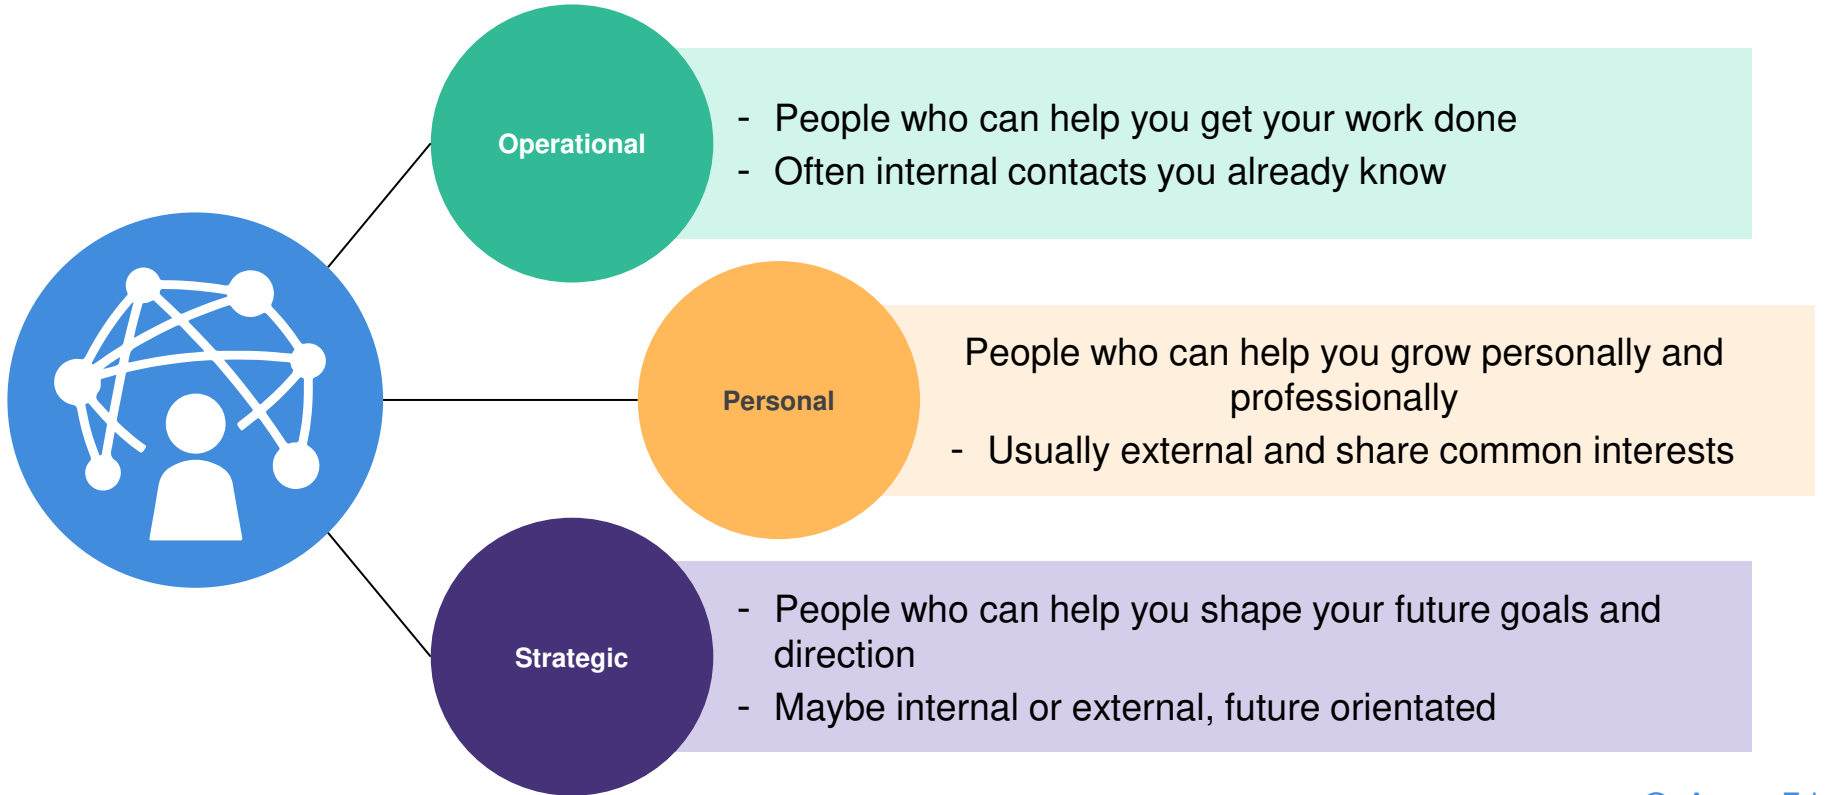

Why is network building for your project important?

- an avenue to exchange ideas
- it helps you get noticed
- brings opportunities
- puts your career and qualifications in perspective
- fosters creativity and collaboration
- can act as a resource
- increases your status and self-confidence
- provides support and mentoring from high profile individuals
- develop long-lasting relationships
- helps you stay on top of latest trends
- helps you become “top of mind” – the first person others think of when it comes to a certain profession, service or industry

3 reasons for networking

Functions within a professional network

Amplifying

Helps you understand current trends and developments

Investing/ providing

Sharing of resources and advice to progress your career or research

Convening/ community building

Also link with the network of your contacts: can find and bring together people that can help you or each other

Facilitating

Organising conferences and networking events to promote work of all members

Filtering

Help to focus your choices more easily

Group discussion

- What are your primary goals for networking?
- Is there any particular objective for a research project that networking might help you achieve?

What happens if I Google you?

What is gender and why does it matter?

45% of employers use social networks to screen job candidates

35% of employers did not offer a job based on a candidate's content uncovered on a social networking site

Facebook and LinkedIn are targets

Careful what photos are posted

Bad mouthing previous employers/colleagues and poor online communication skills also a problem

Do a social media self-audit!

Steps for building your network

Basic steps for building a network anywhere

1

Remember the people you already know

you may already know people (e.g. former professors or colleagues) that could help you get started

2

Follow current developments in your field

will help you identify people you need to meet and show professional value from your side

3

Determine and prioritise your objectives

will allow you to target your efforts and better plan your activities

4

Find common ground

will help you start a conversation and establish a personal connection

5

Practice visibility

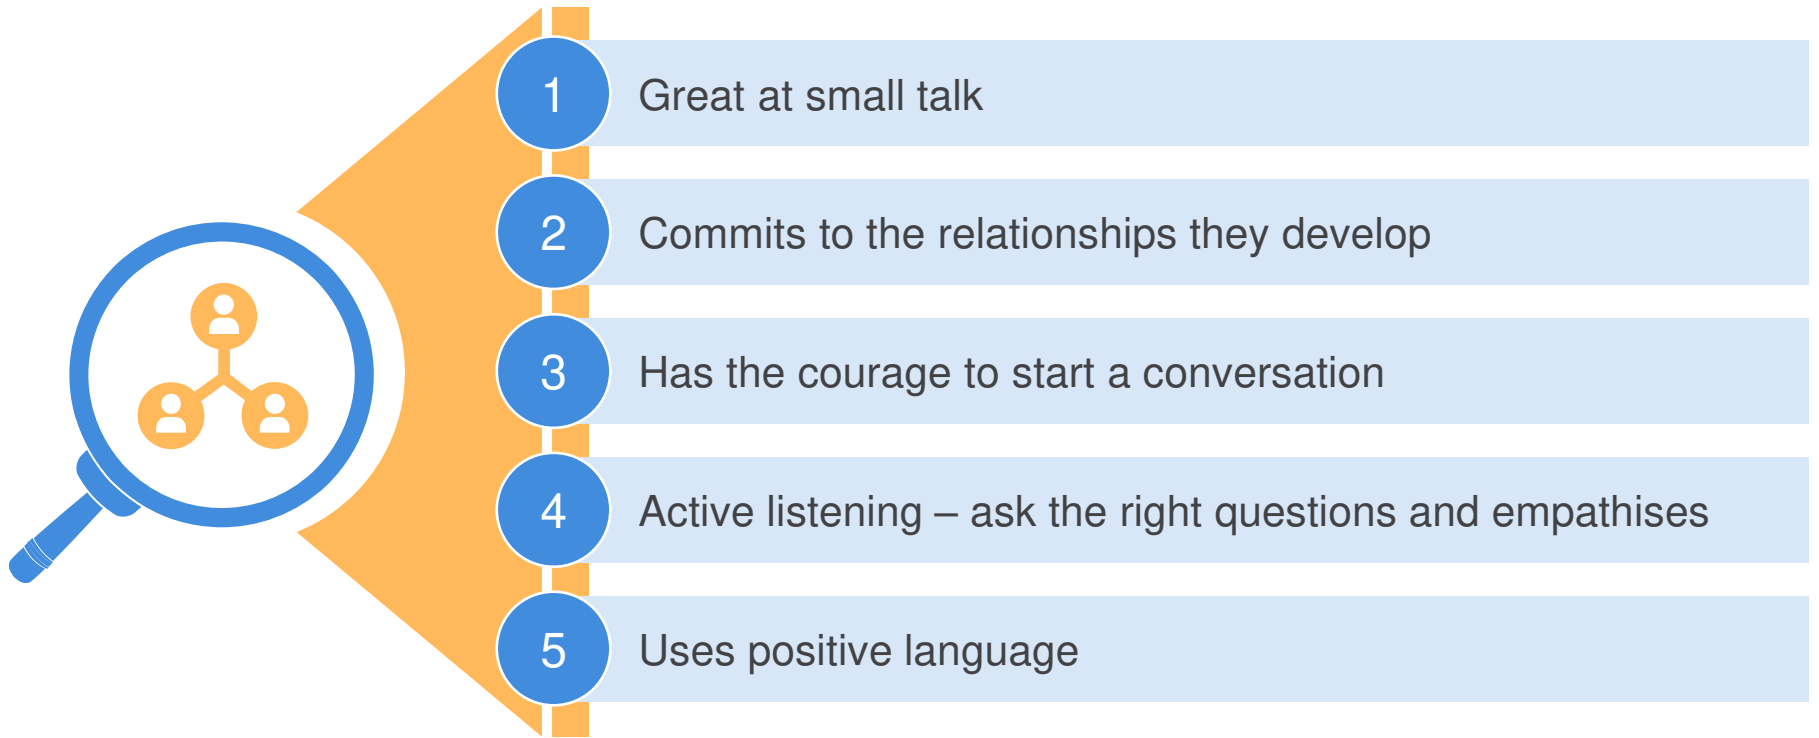

comment and respond to comments on social media and blogs

6

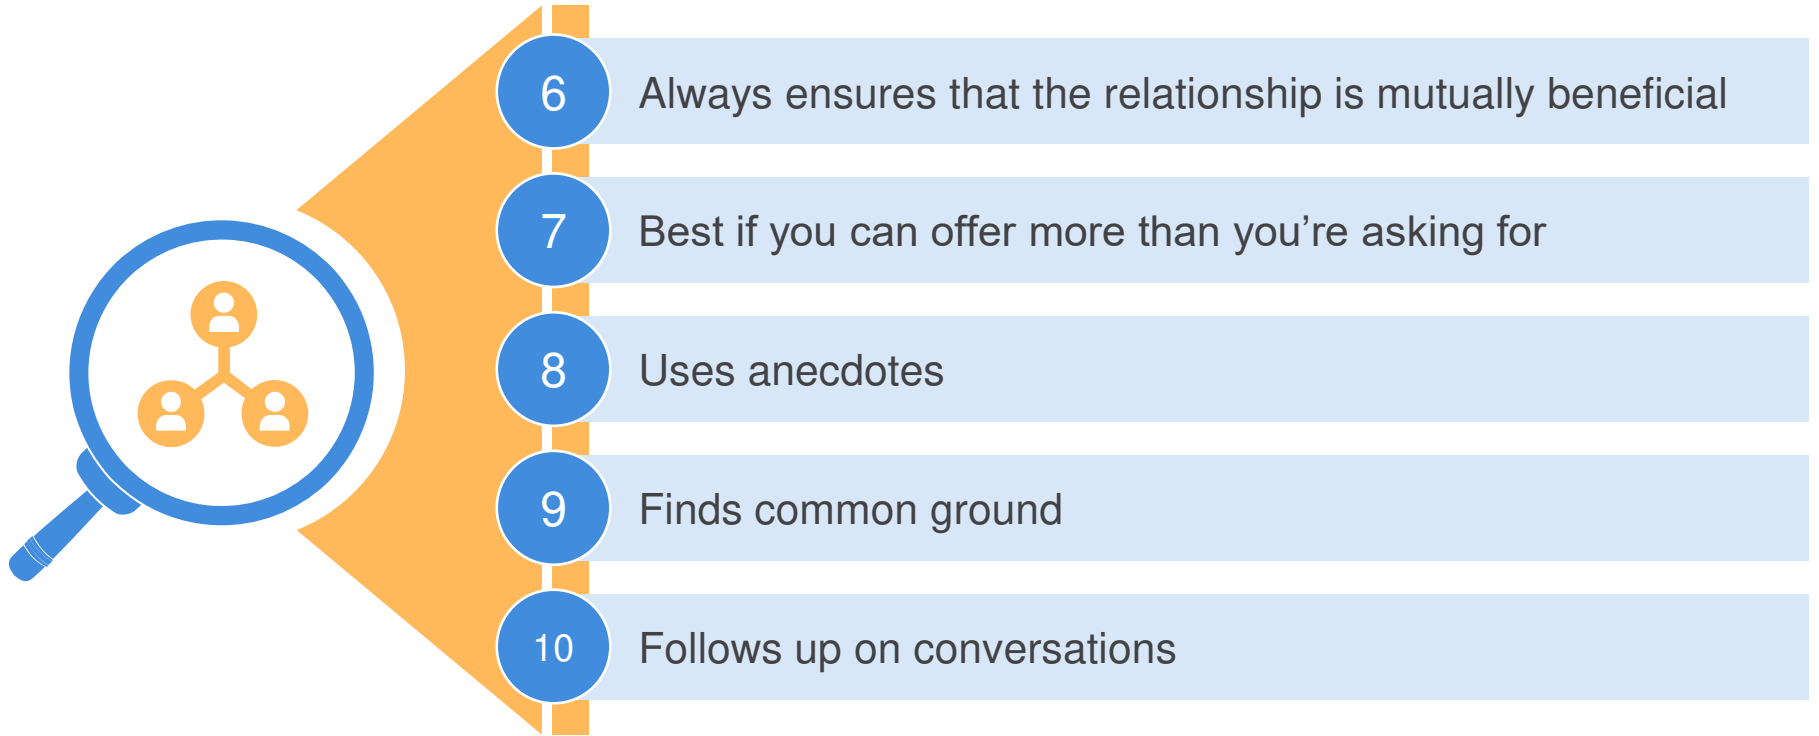

Make it a habit

network frequently to strengthen your relationships and strike up new ones

Skills of good networkers

Skills of good networkers

Breakout room - developing networking skills

One of the key networking skills for success is 'finding common ground with others'. This can help you connect with anyone.

The aim of the task is to identify one point of common ground with each of the other 2 or 3 people in your breakout room.

We will then draw on individuals to feedback to the group

Prompt questions for finding a point of common ground:

- What has first got you interested in your field of study? Has that changed?
- If you could change one thing about your course/life as a researcher, what would it be and why?
- Future plans/ambitions
- Your secret talent
- Your roots!

Where to look to build your network

Your current social network

friends/colleagues/
supervisors and friends of
friends/colleagues of
colleagues/supervisors of supervisors

Local organisations that match your interests

sign up to their newsletters, attend local gatherings

Events and conferences

offer a chance to present your current work and have people come up to *you*

Where to look to build your network

Social media

Twitter, LinkedIn, various blogs etc. are full of potential contacts so it's worth engaging and reaching out

Work/university functions

even if you're planning to leave, you never know who you could connect and form a lasting relationship with

Alumni organisations

provide common ground and a large instant network

Anywhere you go

you always meet people – be it at birthday gatherings, at the gym or while waiting in line for your morning coffee

Where to build your professional network

Think! What sort of approach should be taken in each setting? Is it informal or formal?

**Alumni
networks**

**Job seeker
networking
groups**

MeetUps

Conferences

Trade shows

**Professional
association
events**

**Organisation
membership**

**Fundraising
events**

Societies
(e.g. Royal Academy of
Engineering; Royal
Society of Arts; many
more)

Tea break

Networking discussion/presentation tool: The Narrative Arc

the introduction

Who are you? What motivates you to do what you do? What is your goal?

the problem

What is your main struggle?
What do you hope to get help with by networking?

the attempt at solution

What have you done to solve the problem before you reached out?
Why can't you do anything else?

the resolution

How could a new contact help you? What can you offer in return?

What's next?

What exactly are you asking for? What are the precise next steps? What needs to happen for it to be beneficial for all?

Group discussion

Take 5 mins now to come up with your own research narrative arc. Think about what goals you have in using networking to further your objectives.

We will draw on some people to feedback to the group with their narrative arc.

Network mapping

How to map your network

Take a pen and some paper and draw your network.

1

Start with yourself: put your name in the middle of the page

2

Think about the different sectors of your life: where do/did you meet people?

– Divide the space around your name up in sectors and draw lines from your name to each sector

3

Dig deeper: if one sector is 'school', check that you include all schools you went to

4

Name your contacts and their attributes

– note down their profession and any noteworthy information (even bits such as 'has lived in Dubai' can be helpful)

5

Follow up on interesting contacts via LinkedIn

– it might be worth having a look at your contacts' contacts to identify potential new leads for you

Breakout room

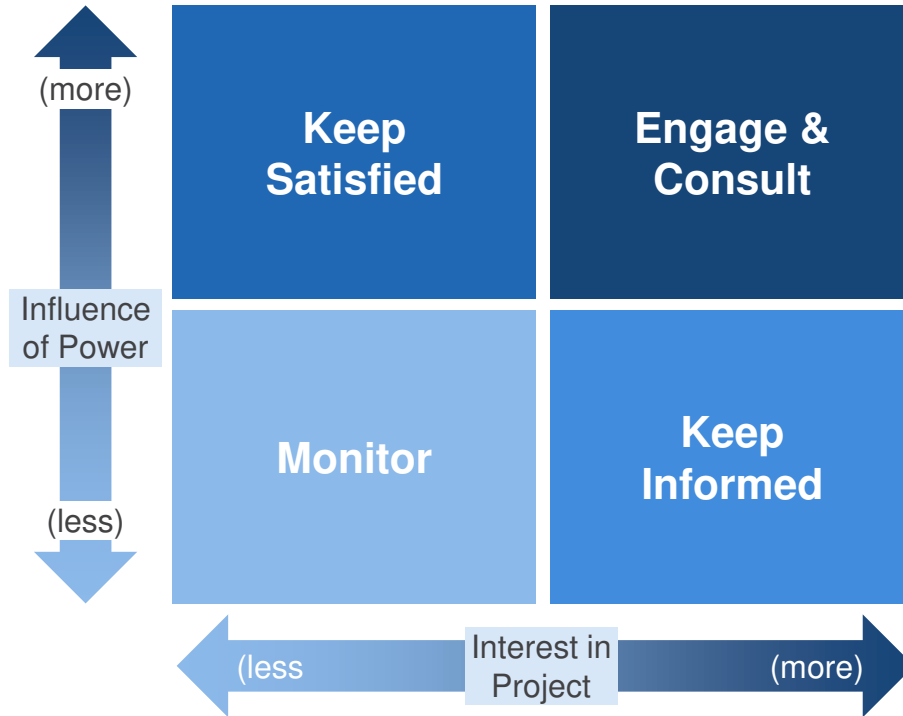

Take the first 5 minutes to draw a map of your own personal network.

Use the second 5 minutes of the breakout room to discuss your network:

- Can you immediately identify any contacts you could reach out to after this training that could help you pursue your goals?
- What about your contacts' contacts?
- Do you have any *shared* contacts as a group?
- What advice do others in the room have for you?

More ways to map people in your networks

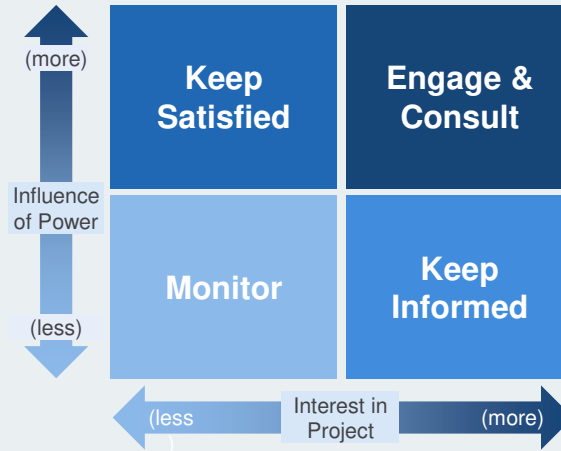

Activity

Spend 5 minutes using this grid - map this grid yourself. Input 2 stakeholders into each section of the grid.

To think about: which of your stakeholders are most difficult to map?

Keynote: Network building in communities

Research presentation and storytelling through networking

Breakout room: story telling exercise for effective communication:

In your break-out groups think of a situation in the past with a group where you could have benefitted from using CCSG or a storytelling method.

Use the CCSG framework to narrate to tell each other your story

Storytelling as a tool and the CCSG model

Model for a good story: Characters, Conflict, Struggle, Goal

Example: a team member might describe a past success of the group or team, where their collective strengths helped them succeed.

- **Characters:** whoever was involved in the team
- **Conflict:** a challenge the team faced - a new growth opportunity or fundraising proposal
- **Struggle:** Geographical distance between team members, working remotely
- **Goal:** the success of working together and submitting the fundraising proposal on time

Network building on a global climate change project

Takeaways on building new networks...

- It can feel forced at times; find your 'in' or talking point (especially if you're an introvert)
- Don't take it personally. By putting yourself out there you'll build your resilience.
- Networks are all around you -- it helps to join these and work with these, don't just strike out on your own
- Events or reasons to bring people together help; they'll show up for the cause but they stay for you
- The networks you make as a Scholar could last a lifetime!

Establishing a fundraising network

- 1 Choose a platform
 - make your fundraiser easy to find and donate to (e.g. GoFundMe, Kickstarter)

- 2 Create a thoughtfully worded and effective mission message
 - be clear on your aims and motivations

- 3 Encourage engagement
 - provide a platform for your fundraisers to share their connection to your cause – it will encourage them to keep coming back

- 4 Recognise the efforts of members of your fundraising community
 - keep your news feed up-to-date and applaud the successes of your community

- 5 Report the reach of your work
 - visualize the tangible impact of your efforts

Development Training record reflections

What have you learnt in relation to your Development Training Record aims?

Action: commit to following up with at least 1 person post-workshop

What can you offer one another?

Who in YOUR network can you connect them with?

Thank you!
