

Christ Apostolic Church - House of Prayer UK - Professional

The Fellowship aims to empower professionals from Commonwealth countries with the knowledge and skills needed to advance entrepreneurship, science and technology for development, and public health improvement. The programme supports youth employment through entrepreneurship and strengthened UK–Africa trade links. Fellows will enhance their technical and professional expertise in emerging fields of science and technology through exposure to advanced research, innovation, and policy frameworks in Scotland. They will also gain a deeper understanding of public health systems, health promotion, and disease prevention through engagement with Scottish and UK healthcare models.

Fellows will engage with institutions such as the Home Office, Scotland Office, and British Council, gaining insights into legal frameworks, social welfare systems, public health policy, and resource mobilisation.

Upon returning home, fellows will apply new knowledge and best practices to support career development, colleagues, mentor young professionals, and implement innovative solutions that address social, economic, and health challenges within the communities.

Eligibility

Mid Career professionals

Youth and young adult

Proposed Programme Dates: 14/02/2027 to 14/05/2026

Priority Theme: Science and technology for development
